  - [Shortest Path](#)

Goal

(S)

As you know  $0+1 < \infty \rightarrow$  A's value changed to 1, From A there is not path to get E,  
and  $0+3 < \infty \rightarrow$  B's value changed to 3

S	A	B	C	K	P	D	F	R	T	I	X	M	E
0	1	3	∞	∞	∞	∞	∞	∞	∞	∞	∞	∞	∞

(B)

As  $3+2=5 < \infty$ , K's value changed to 5, from C to E there is not path to get E,  
As  $3+2=5 < \infty$ , C's value changed to 5

S	A	B	C	K	P	D	F	R	T	I	X	M	E
0	1	3	5	5	∞	∞	∞	∞	∞	∞	∞	∞	∞

(C)

As  $5+1=6 \Rightarrow 6 < \infty$ , D's value changed to 6  
As  $5+2=7 \Rightarrow 7 < \infty$ , F's value changed to 7  
As  $5+3=8 < \infty \Rightarrow$  P's value changed to 8,  $\Rightarrow$  from P we have not path to get E

S	A	B	C	K	P	D	F	R	T	I	X	M	E
0	1	3	5	5	8	6	7	∞	∞	∞	∞	∞	∞

(D)

S A B C K P D F R T I X M E  
 0 1 3 5 5 8 6 7 11 11  $\infty$   $\infty$   $\infty$

As  $5+6=11 < \infty$ , T's value changed to 11, But there is not any way from T to get E.

As  $5+6=11 < \infty$ , R's value changed to 11, But there is not any way from R to E.

(F)

S A B C K P D F R T I X M E  
 0 1 3 5 5 8 6 7 11 11 12 10  $\infty$   $\infty$

As  $7+5=12 < \infty$ , I's value changed to 12, but there is no way from I to E.

A's  $7+3=10 < \infty \rightarrow$  X's value  $\rightarrow$  10

(X)

S A B C K P D F R T I X M E  
 0 1 3 5 5 8 6 7 11 11 12 10 11 18

As  $10+1=11 < \infty$ , M's value changed to 11, but no way to get from M to E.

As  $10+8=18 < \infty$ , E's value changed to 18, we are in the End.

The process End at Cycle one AS there are no vertices to change.
